HOW IT WORKS

01**Press**

Tap the mobile app, click the desktop icon, or use a hot key or optional hardware.

02**Notify**

Alerts reach receivers' phones and desktops, plus SMS, voice and email – in seconds.

03**Locate & confirm**

Receivers see the sender's GPS location and confirm, so the sender knows help is coming.

04**Respond**

The right level of support or security arrives at the right place.

PROVEN RESULTS
ACTUAL USE CASES**266,832**
TOTAL INCIDENTS**80,141**
SERIOUS INCIDENTS**170,500**
ESCALATIONS PREVENTED

STOP PROBLEMS EARLY. RESPOND ANYWHERE.

Mobile + GPS NEW

Staff send and receive alerts from their phones — on the floor, in the lot, or off-site. Every alert carries the sender's GPS location.

One license covers both a computer and a mobile device.

Messages that get through

Instant alerts on mobile phones and desktops, plus SMS, voice and email — all within seconds. Users are warned if their connection drops and shown how to fix it.

In use: an officer away from the office received every message type.

Tracking & risk analysis

Every alert and confirmation is logged. Reports show which people, departments and buttons see the most activity.

In use: after a Lockdown, admins saw who confirmed — and who didn't.

De-escalate early

Offer a "Support" button for low-level concerns — the most common kind — and step in before it turns serious.

In use: a Support alert brought a manager to calm an upset client over a long wait.

Fully customizable

Build buttons and messages by role, department or location. Organize users into Groups; messages can still reach anyone.

In use: only managers can send a Lockdown; each site alerts its local receivers.

Fast rollout

Pure software — no wiring, equipment or service visits. User and button changes push out in seconds.

In use: thousands of stations installed in one hour.
